DDoS & Defacement

In the case study, Distributed Denial of Service (DDoS) and website defacement attacks constitute approximately one-third of all cyber incidents executed by the hacker group. These attacks typically aim to disrupt service availability and compromise the integrity of online assets. According to Fortinet Global Threat Landscape Report 2023, DoS and DDoS are the most common attack type reflecting a significant portion of their tactics

Public Institutions

Nearly 3/4 of the targeted entities are public sector institutions, including police departments, ministries, and associations. This trend highlights the hacker group's focus on exploiting vulnerabilities in governmental and public organizations, potentially aiming to disrupt critical operations and public services.
